

Animal sterile surgical isolator with solid discharge outlet

Published date: June 1, 2017

Technology description

The present invention relates to an animal isolator for use in childbirth in an aseptic state. A solid discharge port is arranged on the left and right sides of the shell of the isolation chamber for aseptic operation of animals. In this way, when performing childbirth operation on sows or the like, it is possible to conveniently discharge a relatively large volume of solids, and when discharging the solids, external air can be prevented from entering, so that the operation is in a sterile state. An animal sterile surgical isolator equipped with a solid discharge port can play such a role.

Application area

Animal sterile surgical isolators
