

Spiral Slit Endotracheal Tube: patent pending

Published date: Feb. 24, 2017

Technology description

An endotracheal tube comprising a flexible hollow tube with a spiral slit traversing a substantial length of the tube. The slit has edges that separate to create an opening by which the tube may be spiral wound onto a medical device, such as a fiber optic bronchoscope, that is in use in a pharynx passage. The angle of the slit is preferably in the range of 30-60 degrees.
