

OpSAFE

Published date: Feb. 5, 2016

Technology description

Summary

OpSAFE is a medical device that enables touch free use of OsiriX MD image viewer for medical images.

Market Opportunity

Increasingly medical images are referred to during medical procedures, for surgeons and interventional radiologists adopting OpSAFE, Osirix MD and apple hardware is a cost effective way of getting easy to operate medical image viewer into sterile environments. The OpSAFE device is ready to sell with CE mark and ISO compliant manufacturing in place. We are seeking licensees in various territories to market and sell OpSAFE .

Advantages

Fully CE marked, the OpSAFE device comprises plug in software, foot pedal and LEAP motion controller. Staff can remain scrubbed in and there is no need for an additional staff member to operate a system in another location as is often the case in current practice. OpSAFE enables medical image viewing controlled by the clinical team in the sterile theatre or procedure room.
